

# Glitter Jars

## To make glitter jars you will need:

- A jar or plastic bottle
- A jug of warm water
- 60mL glitter glue
- 3 drops of food coloring
- 60g-80g glitter

### Step 1

Add Warm Water to your jar or bottle until it reaches around a third of the way up

### Step 2

Add glitter glue and stir until combined with the water

### Step 3

Add around 3 drops of food coloring and stir. You can add more or less depending on your preferred shade, but don't add too much or the mixture will become very dark and it will be hard to see the glitter.

### Step 4

Pour in the glitter! Again, you can use more or less, or go for a mix of chunky and fine to give more texture to your jar. Stir well until combined with the existing mixture.

### Step 5

Top off your jar with the rest of the warm water, until it is almost full. Leave a little gap at the top of the jar to allow the mixture to move.
