

# High Lift VFD/Pump Replacements

## Water Filtration Plant

The high lift pumping system is the primary means of conveying treated water into the distribution system.

The Variable Frequency Drives (VFD) need to be replaced. They were originally installed in the late 1990s and have reached the end of their useful life.

Cost: approx. \$2,000,000

PENNVEST LOAN

Anticipated Completion: 2022

Rate-Payer Capital Expense: 2023
